

MAV-50 Mobile Aircraft Fuel Tank Respiratory Protection System

A complete, portable system that supplies ambient breathable air to personnel entering fuel tanks for inspection or repair. All equipment stores within a tough, reusable container that can be manually transported. Provides a smaller footprint for mobility / deployment operations. Functions with portable or stationary compressed air supply.

SYSTEM CONTENTS

- NF-1200A pneumatic driven ambient air breathing pump
- Two Full Face Supplied Air RC-80 Respirators with 100 ft. of Hose and Attachment Fittings
- 100 ft. Inlet compressed air hose assembly with quick disconnect fittings
- Box of 10 replacement filter cartridges for air pump
- Impact and crush resistant reusable container

SPECIFICATIONS

Classification:	Pneumatic Driven Ambient Air Breathing System
Compressed Air Supply Requirements:	Pressure: 110 psig (7.6 bar)
Air Filtration:	HEPA rated
Air Pressure Gauge:	0-15 psi
Pressure Relief Valve:	Factory set to 15 psi
Filter Service Interval:	70 - 100 hours of run time
