

NF27-1 Electric Explosion Proof Ambient Air Breathing Pump

The electric driven ambient air breathing pump is designed for use in unsuitable respirator areas / job sites. The breathing pump is a portable, compact, electric driven low-pressure pump which provides breathable air. The breathing pump uses a one HP electric motor.

FEATURES AND BENEFITS

- Lightweight and very portable, sets up quick and easy
- HEPA rated inlet and outlet air filtration ensures removal of airborne particles
- Supplies breathable air to operate up to two constant flow RC-80 respirators
- Durable breathing pump design. Less maintenance required intrinsically safe, explosion proof design
- Box of 10 replacement filter cartridges for air pump
- Smaller size footprint for mobility/deployment conditions

SPECIFICATIONS

| | |
|----------------------------|-----------------------------------------------------|
| Classification: | Electric Driven Ambient Air Breathing Pump |
| Power Supply Requirements: | 115-volt, single phase, 60 Hz AC electrical current |
| Air Filtration: | HEPA rated |
| Air Pressure Gauge: | 0-15 psi |
| Pressure Relief Valve: | Factory set to 15 psi |
| Filter Service Interval: | 70 - 100 hours of run time |
